# **Diagnosing Depression Cheat Sheet**

Last updated March 2024

### Major depression

- o Depressed mood + SIGECAPS (4 of 8)
- o SIGECAPS: sleep, interest, guilt, energy, concentration, appetite, psychomotor, suicide

# Bipolar depression (use mood stabilizers/antipsychotics)

o Depression plus history of mania or hypomania

# Depression with mixed manic features (use antidepressant plus mood stabilizer/antipsychotic)

- o Depression plus three of:
  - Elevated mood
  - Grandiosity
  - More talkative
  - Flight of ideas
  - Increased energy
  - Excessively active in an impulsive way
  - Decreased need for sleep

# • Melancholic depression (consider tricyclic antidepressants)

- **o** One of the following:
  - Anhedonia
  - Lack of mood reactivity
- o And at least three of the following:
  - Early morning awakening
  - Worse mood in the morning
  - Excessive guilt
  - Depression that is subjectively different from grief or loss
  - Severe weight loss or loss of appetite
  - Psychomotor agitation or retardation

#### Atypical depression (consider MAOIs)

- Mood reactivity (mood brightens in response to positive events)
- Two or more of the following:
  - o Increased appetite or weight gain
  - o Hypersomnia
  - o Leaden paralysis; ask: "Do you get so depressed that you feel too tired to even move?"
  - o Rejection sensitivity; ask: "When you get disappointed or rejected, does that really affect you or are you able to shrug it off?"

### Psychotic depression (consider antipsychotics/ECT)

- Delusions, often of a paranoid or nihilistic nature, with themes typically about personal inadequacy, guilt, disease, death or deserved punishment
- o Hallucinations of voices putting one down, saying disparaging or critical things

#### Ruminative depression (consider SSRIs/Cognitive Behavior therapy)

o Persistent, intrusive thoughts, typically about personal inadequacies, regrets, and worries about the future.
